UNITED STATES DEPARTMENT OF AGRICULTURE AGRICULTURAL MARKETING SERVICE WASHINGTON, D. C.

APR 1 1955 February 25, 1955

MONTHLY EGG PRODUCTION, 1953-54

Egg production in the United States in 1954 amounted to 5,448 million dozen, a record high output -- 5 percent more than in 1953, the Crop Reporting Board announced today, This increase was the result of a 4 percent increase in the number of layers on hand during the year, and a 1 percent increase in the rate of lay. Egg production in 1954 was above that of 1953 in all parts of the country. Increases were 7 percent in the North Atlantic, 6 percent in the West, 5 percent in the East North Central and South Atlantic, 4 percent in the West North Central and 2 percent in the South Central States.

At the beginning of 1954 there were 2 percent more layers on farms than a year earlier. A 2 percent increase in chickens raised in 1954 resulted in a 3 percent increase in layers on hand January 1, 1955, the 4 percent increase in the number of laying pullets more than offsetting a decrease of 1 percent in the number of hens. On January 1, 1955 farmers had about 397 million layers. The total consisted of 67 percent pullets and 33 percent hens, compared with 66 percent pullets and 34 percent hens a year earlier.

The rate of egg production per layer during 1954 was 18h eggs, compared with 183 eggs in 1953. The rate was at record high levels in all months of 1954 except in January, February, July and August.
